

# Florida Department of Environmental Protection Archeological Surveys for Deadhead Logging Program

This map is a representation of the data collected from archeological surveys submitted to the Department of State - Division of Historical Resources for Deadhead Logging permit applications. It was produced by FDEP using their databases and is intended only for displaying the waterbody areas permitted for harvesting pre-cut submerged timber. The lines are digitized and may not accurately represent the restricted areas. This is to be used only as a tool for general knowledge. This map may contain data of different scales, accuracy, and/or covering different time periods. Due to the large scale of this map, not all area boundaries may appear.
